

Measurements and Dispersion Calculations by the Deutscher Wetterdienst Regarding the Release of Radionuclides at Fukushima Daiichi Nuclear Power Plant

T. Steinkopff, J. Barth, A. Dalheimer, A. Ehlers, G. Frank, H. Glaab, M. Mirsch
Deutscher Wetterdienst, Frankfurter Straße 135, 63067 Offenbach, Germany

Survey

- Surveillance of radioactivity in the atmosphere by DWD
- Meteorological products by DWD
- Measurements of airborne and gaseous radionuclides in Germany
- Lessons learnt

Surveillance of Radioactivity in the Atmosphere in Germany

- **German Meteorological Service (DWD)**

Provision of dispersion forecasts, measurement of activity concentrations in the atmosphere and in precipitation at 48 measuring sites, trace measurements at the measuring sites Offenbach and Potsdam, aircraft measurements in the upper atmosphere

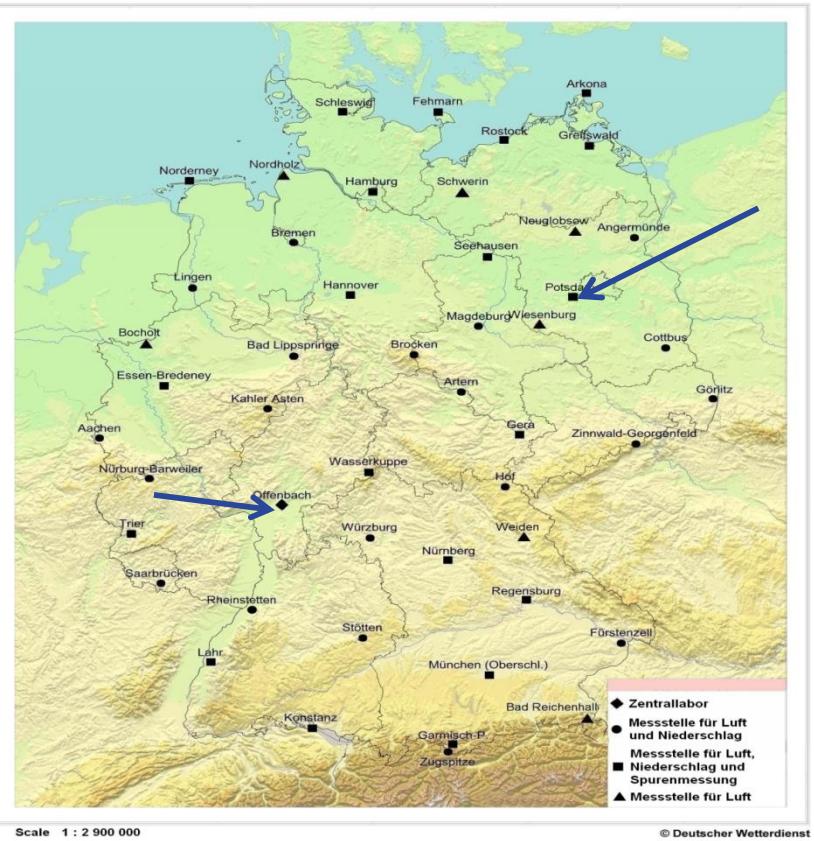

- **Federal Office for Radiation Protection (BfS)**

Measurement of gamma radiation dose rates at 1800 measuring sites, trace measurements at the measuring sites Freiburg/Schauinsland, helicopter measurements

- **Federal Institute of Physics and Metrology (PTB)**

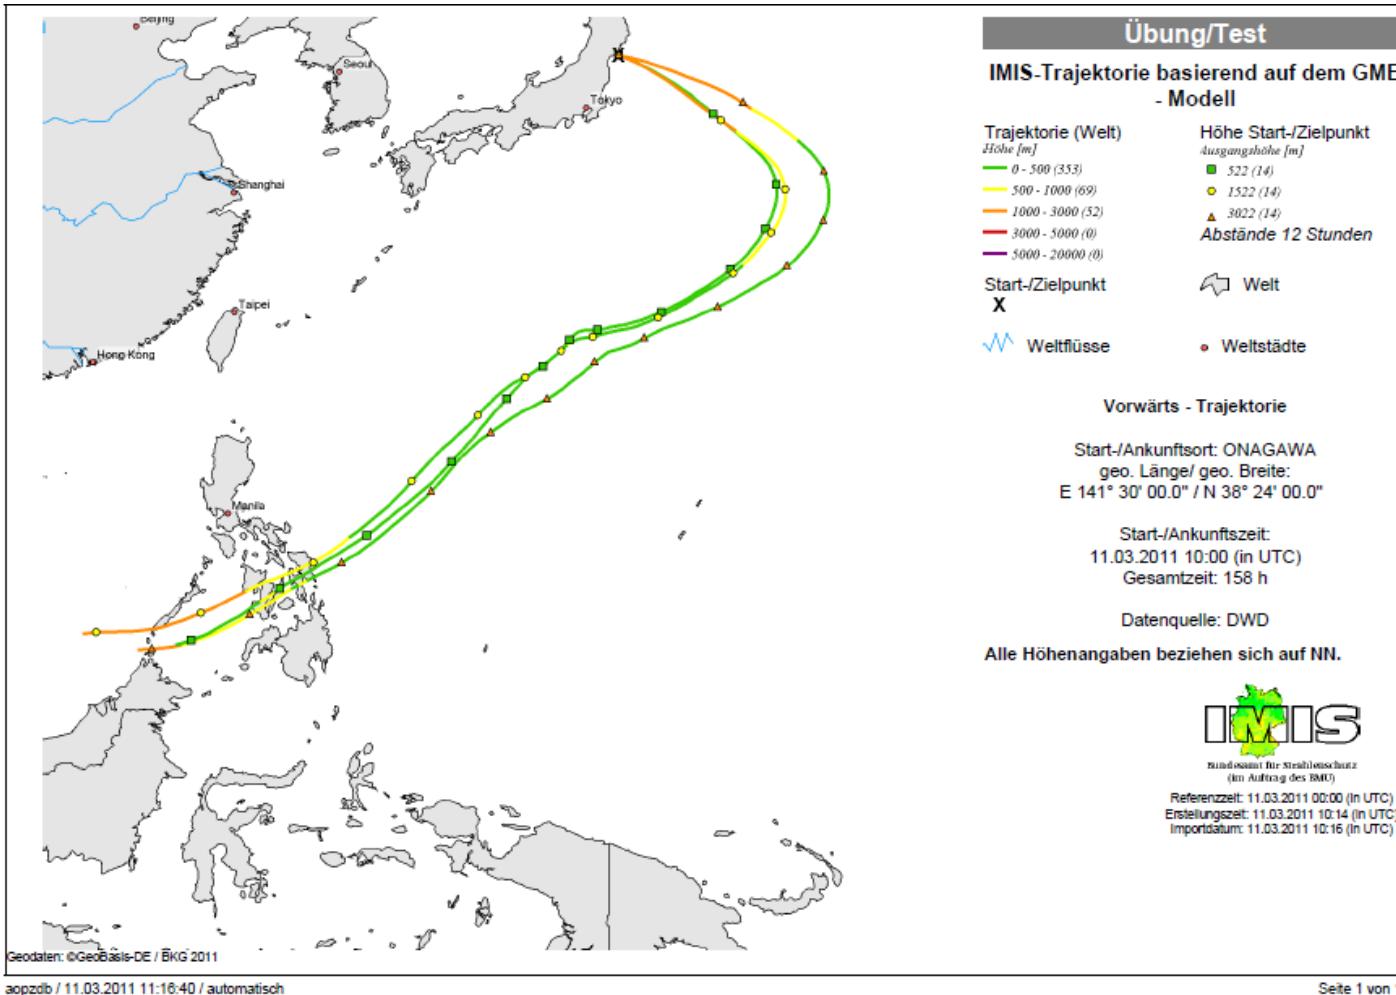

Trace measurements at the measuring site Braunschweig

Measuring sites of DWD

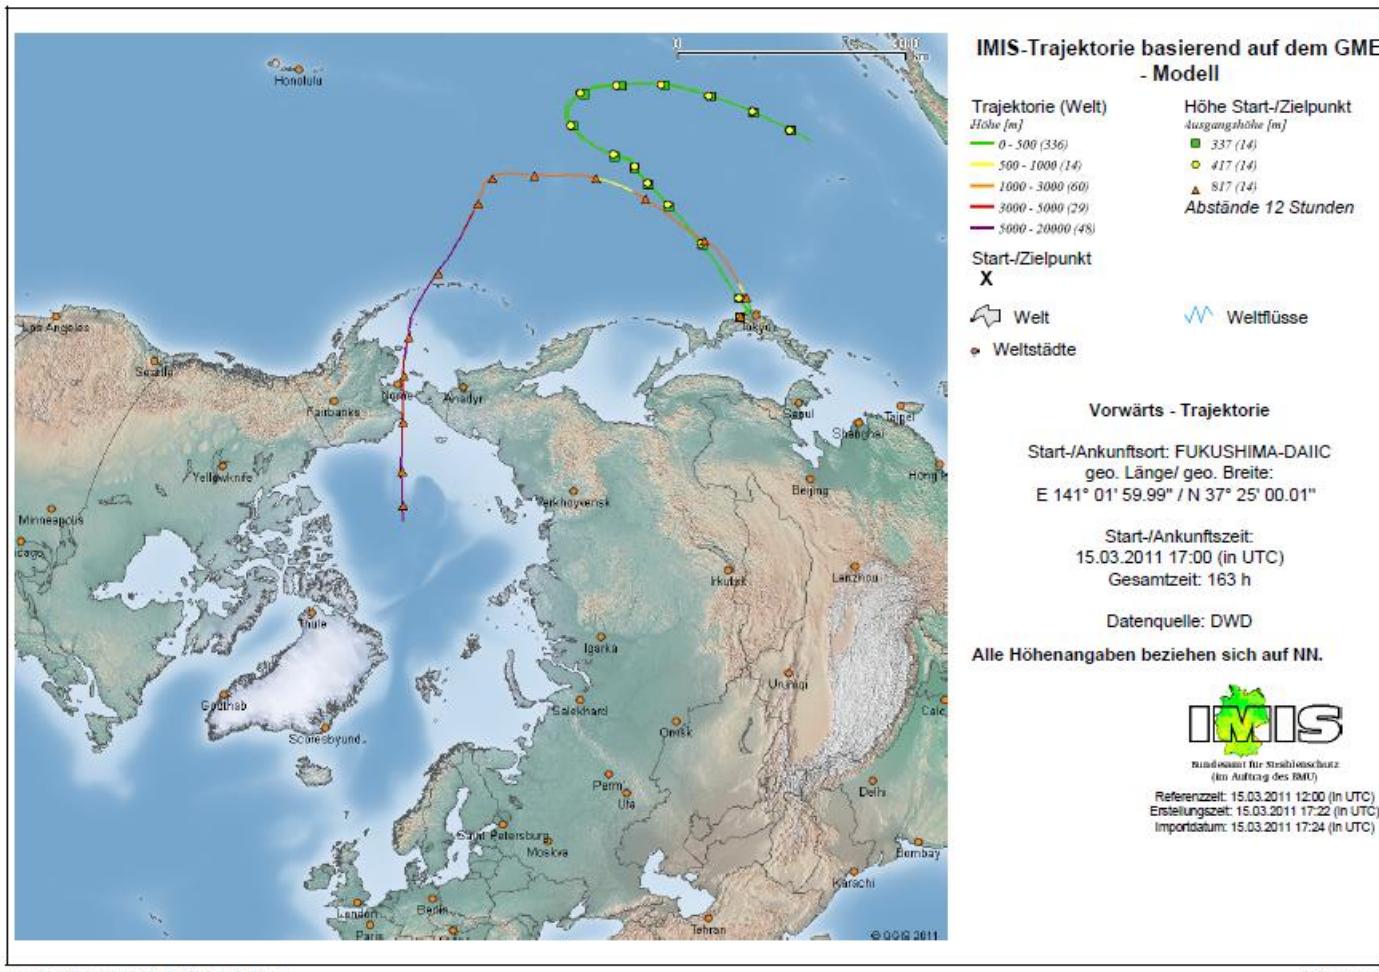

- 48 Measuring sites of DWD with monitoring systems
- Staff available
- Communication infrastructure
- Trace measurements at Offenbach and Potsdam

Trajectories from Onagawa, 11.03.2012

Trajectories from Fukushima, 15.03.2012

Emissions:
0 - 500 m

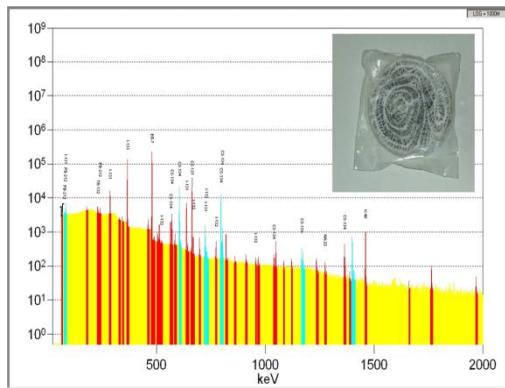

concentrations:
0 - 1,500 m average

Trace measurements of aerosolbound radionuclides

Gammaspectrometry

Gammaspectrum

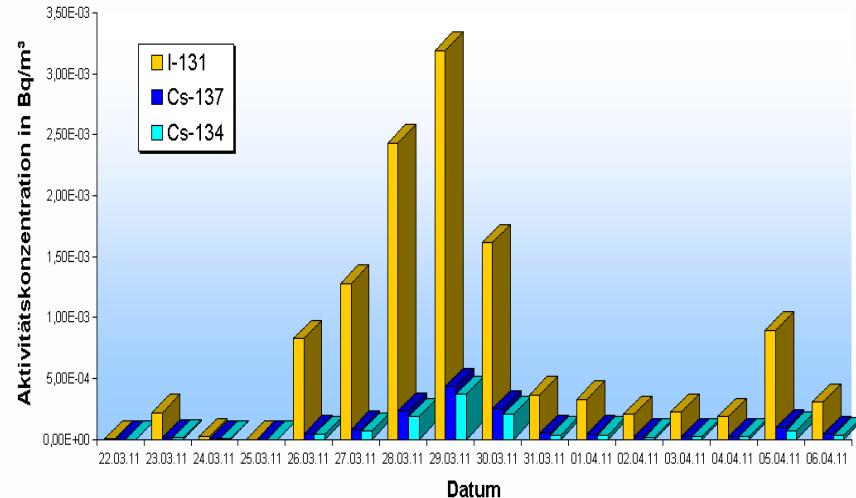

Sampling with 1000 m³/h

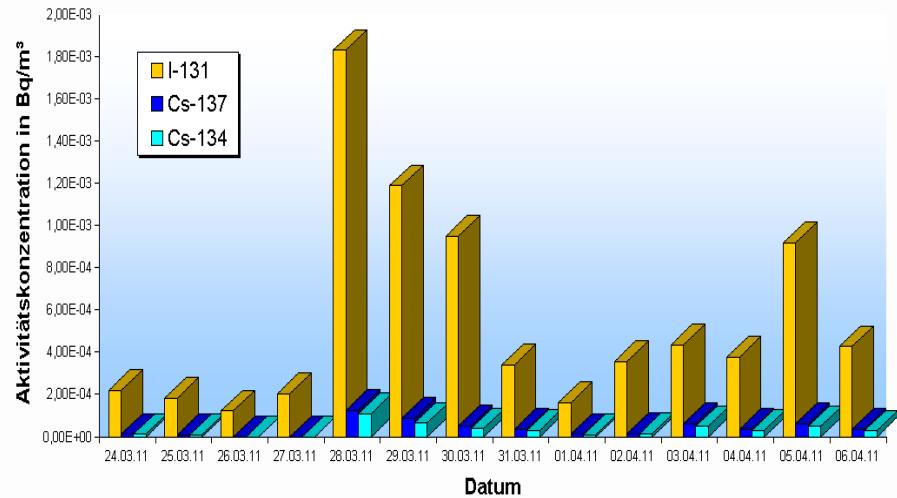

Aerosolbound radionuclides at the measuring sites Potsdam and Offenbach

Gammaspectrometry, daily sampling, Limit of detection 10^{-5} Bq/m³

Spurenmessungen Aerosolfilter
DWD-Messstelle Potsdam

Spurenmessungen Aerosolfilter
DWD-Messstelle Offenbach

Measurement of noble gases Kr-85 and Xe-133

Separation and measurement

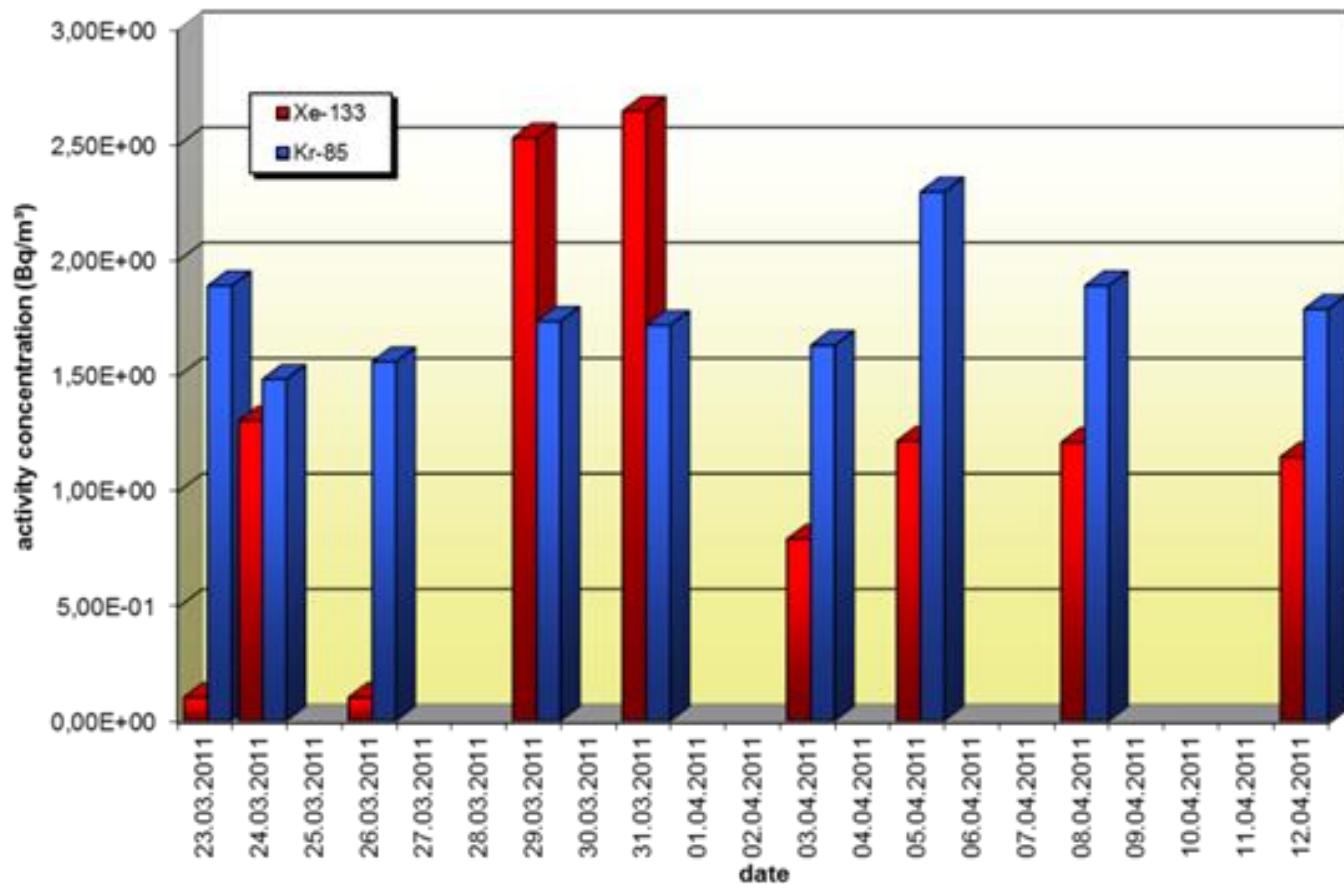

Pretreatment

Sampling on charcoal in liquid nitrogen

Activity concentrations of Kr-85 and Xe-133
at measuring site Offenbach

Aircraft measurements, 30 March 2011

Measuring flights: blue 4,500 m, red 10,000 m

Learjet 35A

Sampling device

Experiences and lessons learnt

- With precise dispersion calculations the time of arrival and the activity concentration were estimated providing important information for the public
- Equipment and staff available at DWD, BfS and PTB to measure low activity concentrations daily
- Measuring data were provided for IMIS/ELAN but also published in addition on Internet of DWD, PTB and BfS
- Personal resources are limited in case of providing suitable information to the public simultaneously as demanded
- Aircraft measurements show results for the upper atmosphere, consequences for the air traffic have to be taken into account
- Demand of information was higher than expected
- Social media have to be provided with information rapidly, using it as an important platform for the distribution of information

Thank you for your attention !
